

19/12/2014

Dear Certifier / Engineer

I like to inform you that on 10th of July 2014 I produced a letter commissioned by accessUTS about AFS Logicwall system based on some additional information provided to me by CSR. This was a confidential report and it is regrettable that the letter was prominently displayed on AFS-CSR website without permission. The letter has since been removed at my request but as it may have caused some confusion among engineers and certifiers, I am obliged to inform you that following further investigations my current views and position is different to those expressed in that letter. I wish to inform you that my final position at the date of this letter is that I support the Structural Engineering Assessment Report by Dincel & Associates Consulting Engineers.

If you require further clarification or wish to discuss this, I am quite happy to be contacted directly. My contact details are given below.
